

ABSTRACT

A method of and system for authorization and authentication downloading utilizes a removable memory having a set of authentication data. A user accesses a server with a handheld electronic device via a wireless Internet connection. The removable memory includes the set of authentication data. The handheld electronic device includes an interface to connect to the Internet when the removable memory is inserted into the handheld electronic device and a connection is formed with a server, using the set of authentication data, the server is able to authenticate the removable memory automatically without the user interfacing personally with the server. The server authenticates downloading to the removable memory in the handheld electronic device by reading the set of authentication data on the removable memory, and downloading the desired content to the removable memory.
